Specialised Dredging Services

We are experienced dredging contractors and we would be pleased to discuss all aspects of your dredging requirements

EXPERIENCED DREDGING SPECIALISTS

We are thrilled to have worked on dredging projects with a wide range of Government, corporate and private clients.

SPECIALISED DREDGING SUPPORT

With many years dredging experience across the UK and Northern Europe we are able to offer advice and support for your dredge licensing applications, offer consultation and oversight on the project itself and handle all regulatory requirements on your behalf.

Jenkins Marine operates a variety of dredging support vessels. All of our vessels can be chartered to support your dredging project and we are happy to consider projects from 100m³ to 100,000m³.

This includes self propelled split hopper barges and back-hoe spud leg pontoons. Our split hopper barges range in capacity from 150m³ to 415m³ and can be used for beach replenishment work. Custom made hardwood protective mats are available for handling small rock and stone material, or for the re-handling of contaminated sediments.

We are experienced dredging contractors and we would be pleased to discuss all aspects of your dredging requirements, from design to completion and including any necessary hydrographic surveys, consents or environmental permissions required for your project.

Certified Vessels

Our vessels and crew are trained and professional and certified for the tasks they carry out.

No hidden costs

We will always make you aware of any potential costs and will discuss these with you as soon as we possibly can before you incur additional charges.

Your Project Partner

We will be with you every step of the way, whether you are simply chartering a workboat or dredging a marina.
